Experience

Freelance AI & Data Engineer – Remote

Nov 2020 – Present

Upwork / Independent Consultant

- Deployed a full-stack Twitter monitoring platform using Docker, Nginx, and a Python/Flask backend to stream live data and deliver AI-generated reports via the OpenAI API
- Bypassed Cloudflare and other anti-scraping measures by implementing IP rotation, crash-recovery loops, and reverse-engineering site navigation to extract 300,000+ records
- Developed a Retrieval-Augmented Generation (RAG) chatbot using GPT-4 and vector embeddings to provide context-aware answers from a custom 400MB+ scraped knowledge base
- Improved a client's failing Selenium scraper, increasing the data extraction success rate by over 90% by reverse-engineering a hidden JSON API and re-architecting the tool for production-level stability and speed

Education

SIMATS Engineering – Chennai, India

Expected June 2026

Bachelor of Technology in Artificial Intelligence and Data Science

- CGPA: 8.84/10
- AWS Certified Cloud Practitioner – Amazon Web Services

Projects

ComiQ: Hybrid MLLM-OCR Engine

September 2024

Tech Stack: Python, OCR, Google Gemini MLLM, OpenCV, NumPy

- **Garnered academic recognition from an MIT and Harvard postdoctoral researchers** for the project's innovative approach, leading to its planned citation in an upcoming research paper and earning 29 stars on GitHub.
- Architected an advanced Optical Character Recognition (OCR) library specifically designed for comics, combining traditional OCR engines like EasyOCR and PaddleOCR with Google's Gemini Flash-2.5 model.

The Magic Methods's Code-Stego (Hackathon Winner)

September 2023

Tech Stack: Python, PIL, Pygments, Numpy, Discord.py, Django

- Led a **randomly-assigned team of 4 to win 2nd Place** in the annual, week-long Python Discord Code Jam of 2023
- Architected a multi-platform application (Django, Discord Bot, Python Library) using LSB steganography to embed source code within its own syntax-highlighted image, making it easily shareable on social media and chat platforms

The Crucible's MCP Server Suite (Hackathon Winner)

October 2024

Tech Stack: Python, asyncio, REST APIs, MCP Server Protocol

- **Awarded 3rd Place** in a competitive AI hackathon by single-handedly architecting and developing five distinct microservices to serve as tools for an AI agent
- Engineered a full suite of servers for Aiven (cloud), Discord, Elasticsearch, MySQL, and Pandas, enabling an AI agent to execute complex, real-world workflows

Mushroom Consumability Classification (Research Project)

June 2024

Tech Stack: Python, scikit-learn, Pandas, Matplotlib, Seaborn

- **Awarded Best Poster** at Tech Star Summit 2024 for developing and presenting a high-accuracy deep learning model for image classification
- Developed a machine learning model that classifies mushrooms as edible or poisonous with 98% accuracy based on physical characteristics, utilizing data preprocessing, feature engineering, and model evaluation techniques
